Sequence 13, Application US/10330613A

Patent No. 6924360

GENERAL INFORMATION:

APPLICANT: Gudas, Jean

TITLE OF INVENTION: ANTIBODIES AGAINST THE MUC18 ANTIGEN

FILE REFERENCE: ABGENIX.022A

CURRENT APPLICATION NUMBER: US/10/330,613A

CURRENT FILING DATE: 2002-12-26

PRIOR PILING DATE: 2001-12-18

NUMBER OF SEQ ID NOS: 90

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                    Sequence 2, Application US/09720493

New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

Disclosure; SEQ ID NO 83; 164pp; French

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of

```
ö
             transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; heavy chain variable region.

The invention relates to a novel isolated anti-insulin-like growth factor capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of pecifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal cativation of the IGF-IR and/or connected with a chyperactivation of the IGF-IR and/or connected with a chyperactivation of the medicament does not induce or only glightly induces secondary effects connected with inhibition of the insulin cereptor. The antibody is useful for preparation of a medicament intended co inhibit the transformation of normal cells into cells with tumoral chemanacter, preferably IGF-dependent, especially IGF-dependent and/or IGF2-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent cells, preferably IGF-dependent cells, in the preparation of a medicament intended for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, cells expressing or overexpressing the IGF-IR and/or EGF receptor.

CE breat cancer, andometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the specific targeting of a biologically which is optionally labeled. The present cells useful in which the abnormal presence, of IGF-IR and/or EGF receptor IS useful in the exemplifica
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

Ab and its fragments are used to prevent or rear diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate. I ung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting to human IGF-IR and, if necessary, capable of specifically inhibiting to human IGF-IR and, if necessary, capable of specifically inhibiting to be an interest on complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful interaction of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a creativation of the IGF-IR and/or EGFR, and/or connected with an intended or interaction of the intended or interaction of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin creaptor. The antibody is useful for preparation of a medicament intended control of induces accordary effects connected with inhibition of the insulin creaptor. The antibody is useful for preparation of a medicament intended control of a medicament intended to inhibit the transformation of normal cells into cells with tumoral capacitally IGF1-and/or IGF2-dependent and/or EGF2-dependent and/or IGF2-dependent and/or EGF2-dependent and/or IGF2-dependent of a medicament intended for prevention or toor the present of a medicament int
                                                                                                      Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
                                                                                                                                                                                                                                                                                                                                                                                            Example 13; SEQ ID NO 85; 125pp; English.
                                                                                                                                                                                                                                                                                     useful for treating cancer

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF) and/or -2; and/or (ii) inhibit specifically tyrosine (Kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit crowth and/or formal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and prostate, lung, breast, andometrium and colon, also osteosarcoma, and by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

```
The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino the preparation of a medicament intended for the prevention for useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a activation of the transduction pathway of the signal mediated by the interaction of IGFP or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly
                                                                                                                                                                                                                                                                                                     Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,

```
induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent, especially IGF1 and/or IGF2.

C dependent and/or EGF-dependent and/or HER2/neu-dependent cells. (I) is useful for preparation of a medicament intended to inhibit the growth and/or the probliferation of tumor cells, preferably IGF-dependent.

CC HER2/neu-dependent cells. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, edometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or for the treatment of psoriails. (I) is useful in preparation of a medicament cintended for the prevention of a medicament cintended for the prevention of a medicament cintended for the prevention of a medicament cintended for the specific targeting of a biologically active compound to cells expressing or overexpressing the IGF-IR and/or EGFR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an expression of a medicament of the prevention of a medicament of proper in vitro diagnosis of illnesses induced by an expression of a medicament of the prevention of a medicament of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                    overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cytostatic; antipsoriatic; antibody; insulin-like growth factor-1 receptor; IGP-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

fragments, that bind to human insulan-like growth factor-1 receptor (IGF-1R) and optionally: (1) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (11) inhibit specifically tyrosine kinase activity of IGF-1R. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or or pidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

```
Ire invention included violation is the functional fragment, being capable of binding to human igF-TR and, if necessary, capable of specifically inhibiting to human igF-TR and, if necessary, capable of specifically inhibiting tyroshie kinase activity of the receptor, comprising a light or heavy chain having at least one complementary capable of specifically inhibiting tyroshie have a city with one determining region (CDR) consisting of one of two fully defined is amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in cariation of a medicament intended for the prevention or treatment of an intense connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGPR, and/or connected with a crivation of the IGF-IR and/or EGPR, and/or connected with a chiperaction of the IGF-IR and/or of EGF with EGPR, where the administration of the medicament does not induce or only slightly induced interaction of the medicament does not induce or only slightly receptor. The antibody is useful for preparation of a medicament intended condition of two inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent and/or HERZ/hou-dependent and/or IGF2-dependent and/or IGF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0; Gaps

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or recet diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of transformation of tumor cells, so are useful against cancers of the profiteration of tumor cells, so are useful against cancers of the profiter and parality paorianis. Bapecially they inhibit growth and/or proliferation of tumor cells, and also osteosarcoma, and also for treating psorianis. Ab are a lso used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

The invention relates to a novel isolated anti-institution of the invention relates to a novel isolated anti-institution being capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of ADZ67004 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal contivation of the IGF-IR and/or EGFR, and/or connected with a chyperactivation of the IGF-IR and/or EGFR, and/or of EGF with EGFR, where interaction of IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin creeptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent and/or IGF2 and/or IGF2-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2
                                                                                                                                                                                                                                                                                                                                                  Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; prosplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskoletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                  Human antibody 7C10 1 heavy chain variable region SEQ ID NO:75.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Duflos A, Haeuw J, Beck A;

preparation of a medicament intended for the prevention or for the treatment of psoriasis. (I) is useful in preparation of a medicament intended for the specific targeting of a biologically active compound to cells expressing or overexpressing the IGF-IR and/or EGFR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-1R) and optionally: (1) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (1) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region; CDR.
                                                                                                                                                                                                                                                                                                               9

      transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

Transcription (1967-IR) antibody (1) or its functional fragment, being grown in invention fragues of binding to human IGF-IR and, if necessary, capable of appable of binding to human IGF-IR and, if necessary, capable of appable of binding to human IGF-IR and, if necessary, capable of appable of binding to human IGF-IR and, if necessary, capable of appable in the prediction of binding typosise in the comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary cards (ADZ67006 and ADZ67014). An antibody of the invention is useful in cardia (ADZ67006 and ADZ67014). An antibody of the prevention or treatment of an illuses connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a critication of the IGF-IR and/or EGFR, and/or connected with a critication of the medicament does not induces accordary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral caparation of a medicament intended to inhibit the growth and/or EGF-dependent and/or EGF-dependent and/or IGF2-dependent cells, preferably IGF-dependent and/or IGF2-dependent cells, (I) is useful in the preparation of a medicament intended for prevention or for the treatment of partial cancer, colorated partial ander and/or IGF2-dependent cells, (I) is useful in preparation of a medicament intended for prevention or for the preparation of a medicament intended for the prevention or color the preparation of a medicament intended for the prevention or color the preparation of a medicament intended for the prevention or color the prevention or color and prevention or color ander (I) is useful in the preparation of a medicament intende
                                                                                                                                                                                                                                                                                                      The invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        19 QVQLQESGPGLVKPSETLSLTCTVSGYSITGGYLMNWIRQPPGKGLEWMGYISYDGTNNY 78
Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      79 KPSLKORITISRDTSKNQPSLKLSSVTAADTAVYYCARYGRVFPDYWGQCTLVTVSS 135

Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (IGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; copplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor;

The invention relates to a novel isolated anti-insulin-like growth factor

I receptor (IGF-IR) antibody (I) or its functional fragment, being

compatible of binding to human IGF-IR and; if necessary, capable of

specifically inhibiting tyrosline kinase activity of the receptor,

comprising a light or heavy chain having at least one complementary

determining region (CDR) consisting of one of two fully defined 16 amino

acids (ADZ67016 and ADZ67014). An antibody of the invention is useful in

confer segion (CDR) consisting of one of two fully defined 16 amino

acids (ADZ67016 and ADZ67014). An antibody of the invention is useful in

confer includes connected with an overexpression and/or an abnormal

activation of the IGF-IR and/or EGFR, and/or connected with a

confirmation of the IGF-IR and/or EGFR, and/or connected with a

interaction of IGF1 or IGF2 with IGF-IR and/or of EGF with EGFR, where

continues accondary effects connected with inhibition of the insulant

induces secondary effects connected with inhibition of the insulant

contacter, preferably IGF-dependent, especially IGF1 and/or IGF2-

consecut for preparation of a medicament intended to inhibit the transformation of medicament intended for prevention or the proparation of a medicament intended for prevention or the preparation of a medicament intended for prevention or the preparation of a medicament intended for prevention or to the treatment of cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for prevention or colon cancer. (I) especially IGF1-and/or IGF2-dependent and/or EGF resement of proparation of a medicament intended for the specific targeting of a biologically active compount to reatment of parametrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the specific targeting of a biologically active compount to reatment of parametrial cancer, endometrial cancer, cancer cancer, endometrial cancer cancer cancer cancer is chosen from prostate cancer canc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; immunoglobulin; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Beck A;

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (1) inhibit matural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (1i) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or pidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit growth and/or proliferation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the proliferation of tumor cells, so are useful against cancers of the proliferation of cumor cells, and one prostocate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating pseciasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
